CAREER OBJECTIVE

A developer with a foundation in Java, Node.js, and RESTful API design using the Microservices architecture. Able to build user interfaces with ReactJS. During my internship at FPT Software, I became familiar with Agile/Scrum processes, used GitLab for source control, followed Git workflows, and collaborated with the team to complete tasks in each sprint.

I aim to work in a professional environment where I can keep improving my skills, stay updated with new technologies, and contribute real value to the company's projects

EDUCATION

INDUSTRIAL UNIVERSITY OF HO CHI MINH CITY

2021 - Present

Majors: Software Engineering | GPA: 3.39/4.0

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+)

Frontend: ReactJS, HTML5/CSS3, MUI, Tailwind CSS

Backend: Node.js, Express.js, RESTful API, JWT, Spring Boot, Hibernate (Basic)

Database: MySQL, SQL Server, MongoDB

Cloud & Tools: Docker, Git/GitLab, Postman, Agile/Scrum, AWS (Basic)

PROFESSIONAL EXPERIENCE

FPT Software (FSA) | Software Engineer Intern

Sep 2025 – Dec 2025

Completed an intensive Full-stack development training focused on Java and Microservices. Developed a Laboratory Management system using ReactJS (Frontend) and Spring Boot (Backend). Worked in Agile/Scrum, managed code with GitLab, and followed FSOFT code quality standards.

OUTSTANDING PROJECTS

Smart Gym Management System (Graduation Thesis)

Aug 2025 - Dec 2025

Frontend - Backend Developer

- Built the backend using Layered Architecture (Controller–Service–Model) to manage members, PT schedules, and subscriptions, and implemented JWT authentication.
- Created a responsive frontend with ReactJS and Tailwind CSS, improved data handling using React Query and TypeScript, integrated MoMo payment, and packaged the system using Docker.
- Integrated AI (Gemini 2.0 Flash) to automatically generate workout and nutrition plans based on InBody data. Developed real-time features with Socket.IO and a QR Check-in/Check-out system, reducing waiting time; added Cron Jobs for automated tasks.

Tech stack: JavaScript/TypeScript, ReactJS, Node.js, Express.js, MongoDB, Google Gemini AI, React Query, Tailwind CSS, JWT, Docker.

Team size: 2

Repository: [Backend](#) | [Frontend](#)

iDev4rum - IT Knowledge Sharing Platform (Student project)

Dec 2024 - May 2025

Frontend - Backend Developer

- Developed a knowledge-sharing platform using Microservices architecture.
- Built a centralized API Gateway to route requests, handle JWT authentication/authorization, and implement rate limiting. Optimized user data queries with Redis caching.
- Improved frontend performance and user experience using Next.js, Tailwind CSS, and Bootstrap. Packaged services with Docker & Docker Compose for consistent deployment environments.

Tech stack: TypeScript, Next.js, Node.js, Express, MongoDB, Redis, RabbitMQ, Docker, Jenkins, Tailwind CSS, Bootstrap, JWT.

Team size: 4

Repository: [repo](#)

The Cake Shop - E-commerce Platform (Student project)

Aug 2024 - Dec 2024

Frontend - Backend Developer

- Developed a complete E-commerce system using Spring MVC with layered architecture (Controller–Service–DAO) for maintainable code.
- Implemented user features: registration/login, product search, shopping cart, order placement, and order history. Built Admin panel for CRUD operations on products, categories, users, and revenue reporting.
- Designed and managed SQL Server database with optimized queries for filtering and pagination. Created user-friendly interfaces using JSP, JSTL, and Bootstrap.

Tech stack: Java 17, Spring MVC, SQL Server, JSP, JSTL, Bootstrap, HTML5/CSS3.

Team size: 3
